

FN76

CONCENTRATION
1/40 000 LITRES

Aderco FN76 is a treatment adapted to the “Diesel Fuel Marine DFM F-76” fuel used by NATO and naval forces ships. It protects and conditions the fuel during long storage periods and stabilizes it to comply with the MIL 1688P standard.

ADERCO FN76

- ✓ Does not change or alter the physical or chemical properties of the fuel.
- ✓ In the tank: protects DFM F-76 fuel during long storage periods by separating water and preventing oxidation and the formation of colonies of microorganisms. In addition, it disperses sludge concentrations and keeps the tanks clean.
- ✓ Avoids incompatibilities due to mixtures of fuels with different origins.
- ✓ In the feed system: keeps feed lines clean and pumping systems lubricated.
- ✓ In the combustion chamber: keeps the combustion chamber cleaner due to improved fuel atomization.
- ✓ In the exhaust system and emissions: improved combustion avoids the formation of unburned carbon, reducing deposits in the exhaust system components and, therefore, a considerable reduction of particulate emissions.

Aderco FN76 is a winning solution to protect your fuel from bacteria contamination

Untreated

Treated

This figure shows Aderco’s unique ability to separate water from the tank wall and fuel. The FN76 action helps to minimizing bacteria development.

ADERCO GUARDS YOUR FUEL AGAINST THE RISKS OF WATER AND BACTERIA CONTAMINATION

Shorter shelf life, less stability and rapid deterioration due to solids precipitation are common issues.

The problem is made worse when water accumulates during storage. Besides degrading fuel on its own, it amplifies the risks.

ADERCO FN76 APPLICATION INSTRUCTION

Aderco FN76 technology is self-dispersing in F-76 fuel oil and can be blended in batches. Maintenance treatment: Use the appropriate proportion following the recommended dose of 1 liter for every 40,000 liters of fuel. Shock doses can be used to obtain more effective results: use double doses in the tank to be treated according to the amount of fuel it contains.

40 YEARS OF MEETING THOUGH FUEL CHALLENGES, SAVING COSTS, DELIVERING EFFICIENCY AND REDUCING EMISSIONS

Our approach is straightforward and based on dialogue to respond the quickest to your need. The implementation of our solutions is systematically monitored, evaluated and quantified - without any disruption to your operations.
