

**CUT  
CARBON.  
CREATE  
VALUE.**

**2055G<sup>+</sup>**  
**FUEL SAVING  
MONITORING SERVICE**

Driving maritime sustainability through innovative solutions that support both the industry and the planet for future generations.

## INTRODUCING THE 2055G+

2055G+ combines Aderco's proven 2055G fuel treatment with a fuel saving monitoring and carbon credit generation.

- Quantify decarbonisation efforts with accurate data and transparent reporting for compliance.
- Generate carbon credits through certified methodologies, turning savings into financial value.
- Comply with evolving regulations and sustainability standards across global shipping markets.

## ABOUT ADERCO

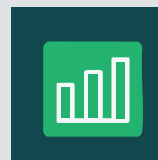

Aderco delivers advanced fuel treatment solutions for the maritime industry. For over four decades, we have helped shipowners improve efficiency, reduce emissions, and comply with global environmental standards.

## WHAT'S INCLUDED:

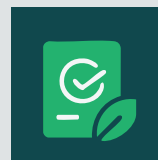

### 2055G ADERCO TREATMENT

Our key fuel treatment for cleaner combustion, improved efficiency, and reliable engine performance.

### FUEL SAVING MONITORING

Detailed reporting to track fuel efficiency and emissions, ensuring compliance and transparency.

### VOLUNTARY CARBON CREDIT

Opportunity to qualify for certified carbon offsets via the Gold Standard Methodology.

## WHY IT MATTERS?

With CII regulations and EU ETS pressures, shipowners need solutions that:

### REDUCE EMISSIONS

Lower fuel consumption and cut harmful greenhouse gases effectively.

### QUANTIFY IMPROVEMENTS

Track operational efficiency with clear, verified performance data.

### GENERATE CARBON CREDITS

Convert emission reductions into tradable financial assets globally.

### COMPLY WITH NEW STANDARDS

Achieve compliance with international environmental benchmarks easily.

2055G+ turns operational efficiency into financial and environmental value.

## FOR WHO?

2055G+ is designed for organisations seeking compliance, cost savings, and measurable decarbonisation.

These include:

Shipowners, Managers, and Charterers

Vessels eligible under **Gold Standard Retrofit Methodology**

## HOW IT WORKS?

Our process combines proven technology with transparent reporting to ensure measurable results and certified carbon credits.

The following steps outline the typical process we follow:

### 1. BASELINE AND TREATMENT

Collect noon reports over a dry dock cycle to establish accurate fuel and emissions baseline.

Apply 2055G for at least 6 months to optimise fuel efficiency and reduce emissions.

### 2. VERIFIED CO<sub>2</sub> SAVINGS

Compare fuel consumption before and after 2055G treatment using verified operational data (noon reports).

Convert verified CO<sub>2</sub> offset into certified carbon credits to generate financial and environmental value.

### 3. CARBON CREDITS

Validate credits under Gold Standard methodology and verified through a third party audit for full transparency. These Corsia-Eligible carbon credits offer high liquidity, high value and high demand, creating opportunities for profitable trading of the carbon credits.
