

Fuel conditioning Protect your bottom line

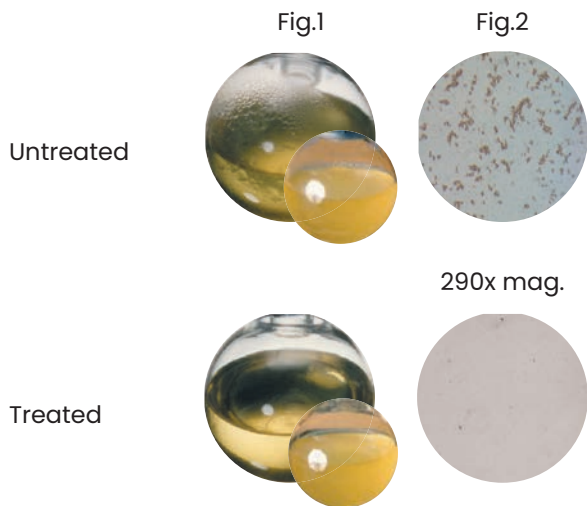

Commercial fuel conditioning with Aderco protects your fuel assets, saves costs and adds value to your product offering.

Protecting your fuel investment starts in the tank

STORAGE – ELIMINATE THE RISKS THAT THREATEN FUEL AND SERVICE QUALITY

Aderco's powerful surfactant action:

- Breaks down water emulsion
- Eliminates water problems
- Prevents microbial contamination
- Prevents fuel oxidation
- Keeps tanks sludge free
- Keeps fuel lines and systems clean

Fig.1. The images on the left from top to bottom are the untreated and treated water emulsion test. The bottom image shows Aderco's unique ability to separate water from the tank wall and fuel. This action protects fuels against microbial growths and oxidation.

Fig.2. The images on the right from top to bottom are the untreated and treated hydrocarbon dispersion tests. The bottom image shows Aderco's unique ability to break down agglomerations in fuels. This action protects fuels against sludge formations.

New engine technology, stricter regulations: Top fuel quality is a must

CONSISTENT FUEL QUALITY IS AT THE CORE OF YOUR BUSINESS SUCCESS

Considering the cost of your fuel and the impact it has on all major aspects of your operations, maintaining consistent quality is key to keeping your pumps running, your customers happy and your costs under control.

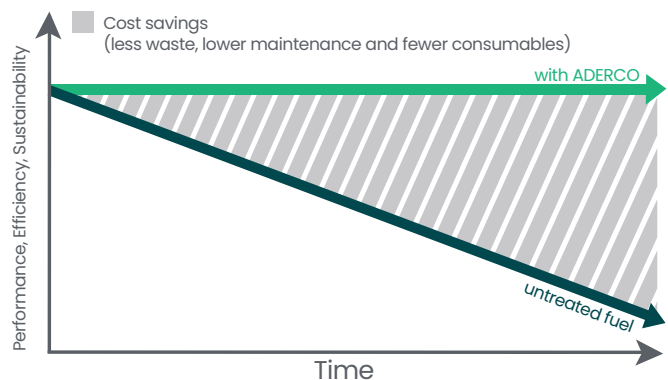

TREATING WITH ADERCO ELIMINATES RISKS AND DELIVERS IMMEDIATE SAVINGS

Aderco fuel treatment solutions deliver an immediate return on investment. They more than pay for themselves by saving fuel, maintenance and repair costs – and generating customer loyalty.

TRANSFORM YOUR FUEL FROM A COST FACTOR INTO A PROFIT CENTRE

Because the quality of your fuel has a direct impact on productivity and costs, your fuel investment requires protection like every other asset in your operations. Aderco not only provides that protection, but also turns your main cost factor into a profit centre.

BETTER, MORE CONSISTENT FUEL QUALITY

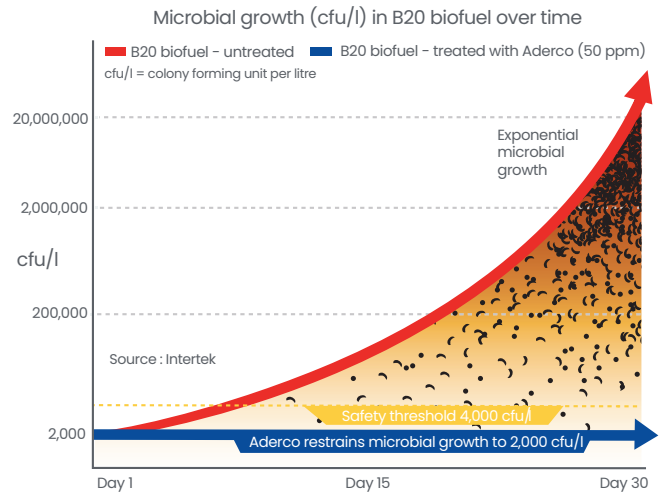

Treating your fuel with Aderco does more than protect your main source of business: It enables you to provide a better quality product while reducing operating costs and ensuring service availability.

ADERCO GUARDS YOUR FUEL AGAINST THE RISKS OF WATER AND BACTERIA CONTAMINATION

Modern oil distillates are blends of straight-run and chemically transformed products. Shorter shelf life, less stability and rapid deterioration due to solids precipitation are common issues. Also, biodiesel (FAME) components raise the risk of bacterial growth, which fouls engine and fuel systems (clogging, breakdowns).

The problem is made worse when water accumulates during storage. Besides degrading fuel on its own, it amplifies the risks.

Independent tests show how Aderco addresses this risk by reliably inhibiting well within the safety margin.

40 Years of meeting tough fuel challenges, saving costs and delivering efficiency

In 1981, Aderco developed a fuel treatment solution to help improve the fuel efficiency, operational reliability and environmental profile of the Canadian icebreaker fleet. Today, our latest-generation, environmentally responsible sustainable fuel treatment solutions are at the core of the business strategy of numerous blue-chip companies in the global marine, mining, land transportation and power generation sectors.

A PARTNERSHIP APPROACH BASED ON DIALOGUE

Our approach is straightforward and based on dialogue. It is aligned with three fundamental principles we share with all of our customers: Efficiency, Economy and Environment. Implementation of our solutions is systematically monitored, evaluated and quantified – without any disruption to your operations.

OVER 40 BILLION LITRES OF FUEL TREATED EVERY YEAR

Around the world, around the corner, Aderco products are trusted by equipment owners and operators, and used in all types of fuel as well as in all types of engines, delivering results and complete satisfaction in compliance with international, national and local standards.

COMPLIANCE AND SUSTAINABILITY

Using Aderco fuel treatment solutions is a step in the right direction. The performance and sustainability of Aderco products is confirmed by and registered with international testing and certification bodies, including Bureau Veritas, SGS, Intertek. Aderco solutions do not impact fuel specifications and are also REACH as well as NICNAS compliant.

“Fuel begins to degrade as soon as it leaves the refinery. Temperature, oxidation and contaminants can cause it to quickly become off-spec. I don’t need that kind of risk. That’s why I rely on Aderco.”

Petrol station owner and Aderco user, Spain

Delivering performance and peace of mind. Around the world, around the corner.

A TRACK RECORD BUILT OVER MORE THAN 35 YEARS

Blue-chip companies trust Aderco since 1981 to keep their fuel-dependent operations running more smoothly, profitably and sustainably.

CONSISTENT QUALITY, CONSISTENTLY

Developed for the most diverse applications involving combustion engines, our products live up to the highest standards – yours.

GLOBAL SERVICE AND SUPPLY SECURITY

20+ stock and service points in strategic locations around the globe ensure quick response and rapid turnaround to meet our customers' mission-critical needs.
